WITH
NANOCLIP

4 GLASSES IN 1

For activities inside and outside the home

- 1 Indestructible glasses made of patented material.
- 2 Sunglasses or blue light protection glasses.
- 3 Glasses for playing, jumping or cycling: thanks to their interchangeable temples with a band.
- 4 Glasses with perfect fit and "anti-fall": thanks to her adjustable mini-band.

NANO FRAME

#indestructible

HINGE 3.0

Indestructible glasses
for all activities!

Snow? Sun? Screens?

The best protection just by "CLIP":

1 ANTI-REFLECTIVE LENSES

3 POLARIZED

2 BLUEBLOCK

Ultra-thin temples **MONOBLOCK**

Discover the new Monoblock straight and ultra-thin frame models.

Their integral design, with the temple and frame cast in a single piece, creates continuous lines and a refined profile that elevates minimalism to its highest expression.

Manufactured using triple injection of Siliflex + Siliflex + Rubber, these two-tone temples contrast with a completely monochrome front, creating a dynamic play of textures and tones.

Monoblock temples allow for an ultra-thin design that guarantees greater comfort during all everyday activities.

The metal core at the temple tip provides the necessary adaptation for a perfect fit.

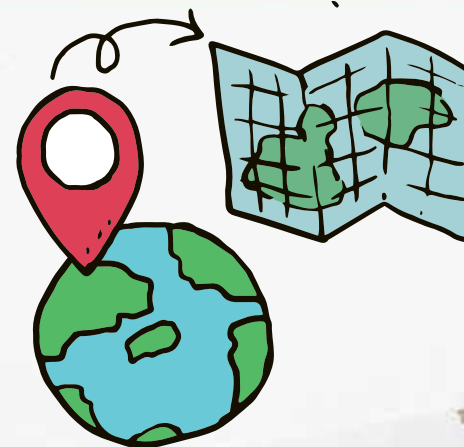

Technology and design combine to enhance the new models with

BRIGHTER LIFE!

“Each increasing diopter can be a lost opportunity”

Myopia can severely affect children's quality of life, hindering their learning, sports performance, and affecting their confidence. In the long term, it can lead to serious problems¹ such as:

- Myopic maculopathy
- Retinal detachment
- Cataracts
- Glaucoma

Delaying its progression by 1 diopter during childhood reduces by 40% the risk of myopic maculopathy, the leading cause of irreversible vision loss in the world².

THE PERFECT SYNERGY

The success of **MYOP-K** lies in its perfect synergy with **Nano Vista**, frames, forming an unbeatable combination. Our patented **Siliflex™** material is ultra-resistant, flexible, hypoallergenic, BPA-free, plant-based, and 100% recyclable, making our frames **#INDESTRUCTIBLE**.

Specifically designed for children, not just scaled-down adult glasses; we use children's facial scans for precise fitting at each growth stage.

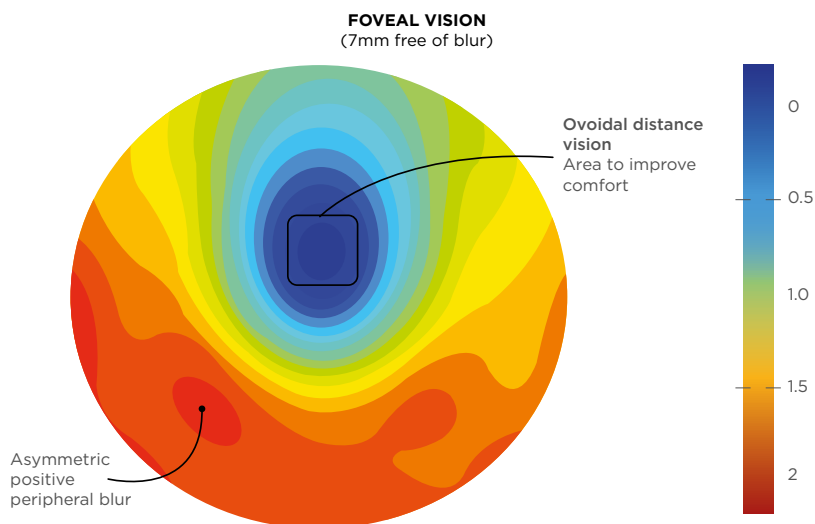

Additionally, each frame has an interchangeable band and mini-band. This **versatility** allows adaptation to children's active lifestyle and keeps the lenses in the correct position all day.

NANO VISTA MYOP-K

HOW DOES IT WORK?

Nano Vista MYOP-K was born after years of research and development. Its revolutionary technology is based on a clear central zone and peripheral defocus that ensures all light rays focus within the retina, preventing greater ocular elongation and thus slowing myopia progression.

3. In 73% of children, myopia increase was less than 0.25D after one year of use.
4. Prospective, controlled, randomized, double-blind clinical study led by the European University of Madrid with 83 children (clinical trial NCT05250206).

EFFICACY DEMONSTRATED IN EUROPEAN STUDIES⁴

The results of the first study on European myopic children speak for themselves:

- In 73% of cases, MYOP-K lenses managed to significantly slow myopia progression compared to standard monofocal lenses.
- 91% of children using MYOP-K had an increase of less than 0.5D in both eyes over one year.

Additionally, MYOP-K stood out for its **comfort, performance, and clarity**, ensuring effective myopia treatment and excellent adaptability.

73% Myopia significantly slowed after 12 months

MYOP-K

WHY CHOOSE NANO VISTA MYOP-K?

- 1** Proven results in managing myopia progression.
- 2** Improves child's quality of life, both short and long term.
- 3** Excellent visual quality and quick adaptation period.
- 4** Aesthetically undetectable.
- 5** Perfect synergy with our Nano Indestructible frames.
